PROFESSIONAL SUMMARY

Software Engineer with 3–4 years of experience building scalable backend systems using Java, Spring Boot, and Node.js. Strong expertise in RESTful services, microservices architecture, and clean, maintainable code with a focus on performance and reliability. Hands-on with MySQL and PostgreSQL, distributed systems, asynchronous workflows, Docker, and Kubernetes. Proven ability to work independently and in cross-functional teams, contributing to system design, code reviews, and CI/CD pipelines.

TECHNICAL SKILLS

Languages: Java, Python, TypeScript, JavaScript (ES6+), SQL

Frontend: Angular, HTML5, CSS3, Redux, Bootstrap, Tailwind CSS

Backend: Spring Boot, REST APIs, Microservices, Node.js

Databases: MySQL, PostgreSQL

Cloud & DevOps: AWS, Docker, Kubernetes, Jenkins, CI/CD

Architecture: Microservices, OAuth2, JWT, OIDC, TDD, Web Performance Optimization

AI & Data: LLM Inferencing, LangChain, TensorFlow, PyTorch

Tools: Git, GitHub, JIRA, Apache Kafka, Selenium, WebSockets

WORK EXPERIENCE

Full-Stack Developer | **LTIMindtree** September 2024 – Present

- Designed and delivered a scalable Selenium-based automation full-stack application using Node.js, TypeScript, Angular, and MySQL, ensuring performance and maintainability.
- Developed and implemented RESTful APIs, SOAP services, and microservices architectures, enabling real-time communication through WebSockets.
- Implemented secure authentication and authorization mechanisms using OAuth2, OIDC, and JWT standards.
- Contributed to CI/CD pipelines using Jenkins, Docker, and Kubernetes for automated build, testing, and deployment processes.
- Containerized and deployed cloud-native applications, improving release reliability and system scalability.
- Orchestrated AI-integrated asynchronous workflows within microservices ecosystems using Kafka.
- Collaborated with QA teams to execute test plans, conduct code reviews, and enhance automation strategies.
- Worked closely with cross-functional BFSI stakeholders, translating business requirements into scalable technical solutions.

Junior Technical Associate | **MyCaptain** January 2022 – June 2024

- Developed and maintained scalable web application features using React, TypeScript, and JavaScript, translating business requirements into production-ready solutions aligned with Agile methodologies.
- Implemented unit and component-level testing using Jest, ensuring code reliability and maintainability while following secure coding standards.
- Collaborated with cross-functional teams to design and enhance RESTful APIs and system integrations within a microservices-based architecture.
- Built and optimized internal CRM and reporting tools to enhance data tracking and process automation using JavaScript, React, Redux, and Jest.
- Conducted root cause analysis and defect resolution for production and testing issues, ensuring timely delivery and system stability.
- Identified and supported automation initiatives that improved onboarding and training efficiency by 20%.

PROJECTS

Scriptless Automation Framework — *Lead Developer & Solution Architect*

Technologies: Angular, TypeScript, Spring Boot, Java, Selenium, Apache Kafka, MySQL, Docker, Kubernetes, Jenkins, OAuth2, OIDC, JWT

- Built a scriptless automation platform enabling non-technical users to create and execute automated test cases without writing code.
- Designed on a microservices architecture with real-time execution monitoring, secure authentication (OAuth2/OIDC/JWT), and AI-integrated workflow orchestration.
- Adopted across 6+ international BFSI projects (Finland, Norway, Denmark); reduced manual testing effort by 78% and supported 20+ active users.

Trailr – Travel Discovery Platform — *Lead Developer*

Technologies: Java, Angular, Spring Boot, Mapbox GL JS, MySQL

- Built a map-centric travel web application with GeoJSON-based REST APIs to efficiently serve geospatial data.
- Designed and optimized relational database schemas for high-performance querying and implemented real-time filtering using RxJS.
- Improved application performance by 80% through lazy loading, optimized API payloads, and responsive design techniques.

EDUCATION

Bachelor of Technology – Electronics & Communication

Shri Ramdeobaba College of Engineering and Management, India

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Computer Networks, Software Engineering

ACHIEVEMENTS

- Led architecture, development, and enterprise adoption of a Selenium-based automation platform at LTIMindtree, deployed across 6+ international projects.
- Reduced manual testing effort by 78% through scalable automation frameworks and reusable testing solutions, accelerating release cycles.
- Managed and mentored a team of 4+ developers, driving feature development, conducting technical training, and fostering engineering best practices.
- Enabled automation for 20+ active users across projects by continuously enhancing platform capabilities and ensuring high reliability and scalability.

LEADERSHIP EXPERIENCE

Creative & Technical Systems Head | **Students' Representative Council** *June 2022 – January 2024*

- Taught Web Development, database fundamentals, and debugging basics to students through interactive lessons.
- Fostered a collaborative learning environment, helping students learn test automation and enhance problem-solving skills.
